

Why we use and recommend NuVet Vitamins

Here at Paramount, we have been using NuVet since 2013. I am a firm believer in prevention verses treating problems after the fact. While we have used these vitamins for many years, it wasn't until the H3N2 dog flu first reared it's ugly head, that we became firm believers in NuVet. We were at our National Specialty when this dog flu first started appearing. And, like many others, we were highly concerned. Luckily, all of our dogs were on NuVet vitamins and coupled with prayer and reconfiguring our crates to face each other to help limit passing germs as much as we could, none of our dogs contracted this virus. We even had one of our boys go play with another exhibitor's dog that ended up getting sick with he dog flu the very next day. This is when my belief in NuVet was really solidified! We have continued using this product to help boost our dogs' immune systems and help give growing puppies those beneficial vitamins they need. While I understand some people may not want to keep their dogs on vitamins their entire lives, we encourage people to consider keeping their puppies on this product for their first year of their lives. We want the very best for all our babies, here at Paramount and also with their new families!
